Python

Run

```
import random
from words import WORDS
from feedback import evaluate

class WordleGame:
    def __init__(self, length=5):
        self.length = length
        self.target = random.choice([w for w in WORDS if len(w) == length])
        self.history = []

    def run(self):
        print(f"Wordle - {self.length} letters, 6 guesses.")

        attempts = 0

        while attempts < 6:
            guess = input("> ").strip().lower()

            if guess == "q":
                print("Game quit.")
                return

            if len(guess) != self.length or not guess.isalpha():
                print("Enter a valid word of the required length.")
                continue

            attempts += 1

            feedback = evaluate(self.target, guess)
            self.history.append((guess, feedback))
            print(" ".join(feedback))

            if guess == self.target:
                print(f"Solved in {attempts} guesses!")
                return

        print("Out of guesses!")
        print("The word was:", self.target)
```

Add 4 letter, 5 letter and 6 letter modes. Let the player choose the word length at the start and make sure the

guesses match the selected length. Add some 4 and 6 letter words to the existing word list.

Python

Run

```
import random
```

```

    game.run()
```

Add a simple guess history so I can see my previous guesses and their feedback. At the end, show a clear summary saying whether I won, lost or quit. Also make sure the README requirements are covered and don't add anything unnecessary.

Python

Run

```
import random
from words import WORDS
